

Genealogy Record Workflow Guide

How to capture, parse, and file genealogy records using the tools in this directory.

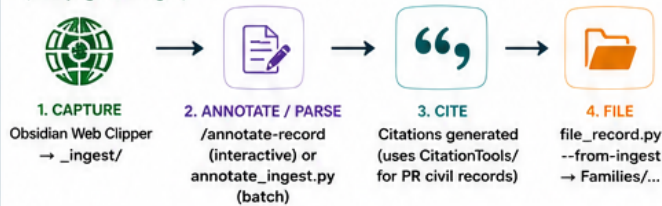

THE COMPLETE RESEARCH CYCLE

The capture → parse → file pipelines below are the middle of a larger research cycle. The full loop, mapping each stage to its tool:

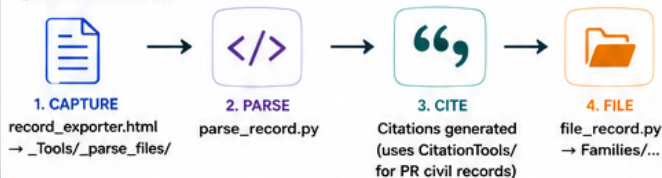

THE MIDDLE: CAPTURE → PARSE → FILE PIPELINES

INGEST PIPELINE (web pages / images)

EXPORTER PIPELINE (paste-able records)

#	Stage	Tool / procedure
1	PLAN	Create/pick a Research Question and log the search plan in Airtable ("Monserate Ramos - Research Log" base). See Accreditation-Prep/AIRTABLE-WORKFLOW.md — the core research cycle, Research Questions, and Family Groups.
2	SEARCH	Search the sites, tracking every site touched with Goldie May (manual for now). Unsuccessful search → log a negative-search Research Log entry in Airtable (procedure in AIRTABLE-WORKFLOW.md, "Negative searches") and stop here.
3	CAPTURE	Successful search → clip with Obsidian Web Clipper into _ingest/ (see Ingest Pipeline below), or for paste-able records use record_exporter.html → _Tools/_parse_files/ (Step 1 below).
4	ANNOTATE / PARSE	Ingest path: /annotate-record (interactive) or annotate_ingest.py (batch) — adds Extract, Summary + Resumen, Citation, Next Steps. Exporter path: parse_record.py.
5	CITE	Citations are generated in stage 4. For Puerto Rico civil registration records (birth/marriage/death), the deterministic generator in Tools/CitationTools/ is used — see "Citation Generators" below.
6	FILE	file_record.py / file_record.py --from-ingest routes the record into Families/SURNAME/Person/.
7	UPDATE PERSON FOLDER	Confirm the record landed in Families/SURNAME/Given_Surname/ Given_Surname.md and review it: frontmatter (name, born/died, record_types), timeline, connections, and the record image (see "Images" under Step 3).
8	LOG	Complete the Airtable Research Log entry, then update any other tables the record warrants — People, Families/PersonFamily, Research Questions, Document Inventory. See the two checklists below. Run _Tools/log_research_entry.py --from-file <record.md> to pre-fill a Research Log row draft from the annotated .md (dry-run — it maps the deterministic fields and flags the judgment fields as NEEDS HUMAN); you still paste it in and pick Source/Information/ Evidence Type + the Research Question/ Family links by hand.
9	CLOSE OUT	Run the "Done means done" gate below before starting the next search.

CITATION GENERATORS

For Puerto Rico civil registration records (birth, marriage, death), the deterministic citation generator in Tools/CitationTools/ is used. It produces consistent, source-appropriate citations for PR civil registry.
See Tools/CitationTools/README.md for details and templates.

RESEARCH LOG CHECKLIST (AIRTABLE)

- ☐ Create/complete Research Log entry
- ☐ Link to Research Question(s)
- ☐ Link to Family Group(s) (if applicable)
- ☐ Record Source(s) searched
- ☐ Information / Evidence Type
- ☐ Result (Success / Negative search / Partial)
- ☐ Notes (search terms, filters, site notes)
- ☐ Link to record file (or note why none)
- ☐ Date completed

Procedure & negative searches:
See Accreditation-Prep/AIRTABLE-WORKFLOW.md

UPDATE OTHER TABLES CHECKLIST

- ☐ People (create or update person)
- ☐ Families / PersonFamily
- ☐ Research Questions (status / notes)
- ☐ Document Inventory (add document)
- ☐ Any other relevant tables

Update only what the record warrants.
Quality over quantity.

DONE MEANS DONE GATE

Before starting the next search, confirm:

- ☐ Record filed in correct person folder
- ☐ Person folder reviewed and updated (frontmatter, timeline, connections, image)
- ☐ Research Log entry completed in Airtable
- ☐ Other tables updated as needed
- ☐ Notes captured for next steps

If all boxes are checked → DONE.
You can close this research cycle.

LEGEND

- Plan
- Search
- Capture
- Annotate / Parse
- Cite
- File
- Update Person Folder
- Log
- Close Out
